

UCD Conway Institute of Biomolecular & Biomedical Research is delighted to make this established module more widely available to graduates through the new Dublin Region Higher Education Alliance initiative. This module has attracted national & international graduates through its origins in a Marie Curie doctoral programme and in collaboration with Molecular Medicine Ireland.

March 26th - May 28th 2009, weekly
Thursdays, 9.30am – 12.30pm
Registration deadline: Friday, February 27th 2009
Email: mniest@ucd.ie

Open to graduate students in science, medicine and veterinary science, this course comprises ten 3hr seminar-style sessions designed to encourage interaction and discussion and is accredited (5 ECTS) on successful completion of course assessment

Course Content

- How recent developments in neuroimmunology are changing established concepts in both immunology and neuroscience
- Provides an overview of current and developing concepts in neuroimmunology from both neuroscience and immunology perspectives.
- Familiarises students with the molecular and cellular elements of interconnectivity between the immune and nervous systems
- Examines the effect of neuroimmuno interaction on physiological responses and disease processes

Student Recommendations

'Really beneficial to learn from people with such different areas of expertise'

'High quality presentations from each individual lecturer'

80% of students would recommend this module to their peers
